

ECZ-ID Agent Passport AWS Marketplace Getting Started and Technical Guide

From AWS subscription to a working, resolver-verifiable Agent Passport with minimal friction.

AGENT PASSPORT · AWS GETTING STARTED

PRIMARY READER

AWS Marketplace subscriber, cloud administrator, developer and customer administrator.

SECONDARY READER

Procurement, security architecture, platform operations and technical support.

WHEN TO READ THIS

You have found ECZ-ID Agent Passport in AWS Marketplace and want to activate it correctly.

RELEASE

2026.10 · 15 October 2026

WHAT YOU WILL KNOW AFTER READING

You can complete the AWS acquisition path, reuse or create the supported account / Parent, obtain the Agent Passport, open Dashboard and verify it in Resolver.

WHAT THIS DOCUMENT DOES NOT ESTABLISH

AWS Marketplace supplies acquisition context. It does not become the canonical ECZ-ID identity store or authority root.

NEXT

After activation, use the Operations guide to keep state, bindings and evidence current.

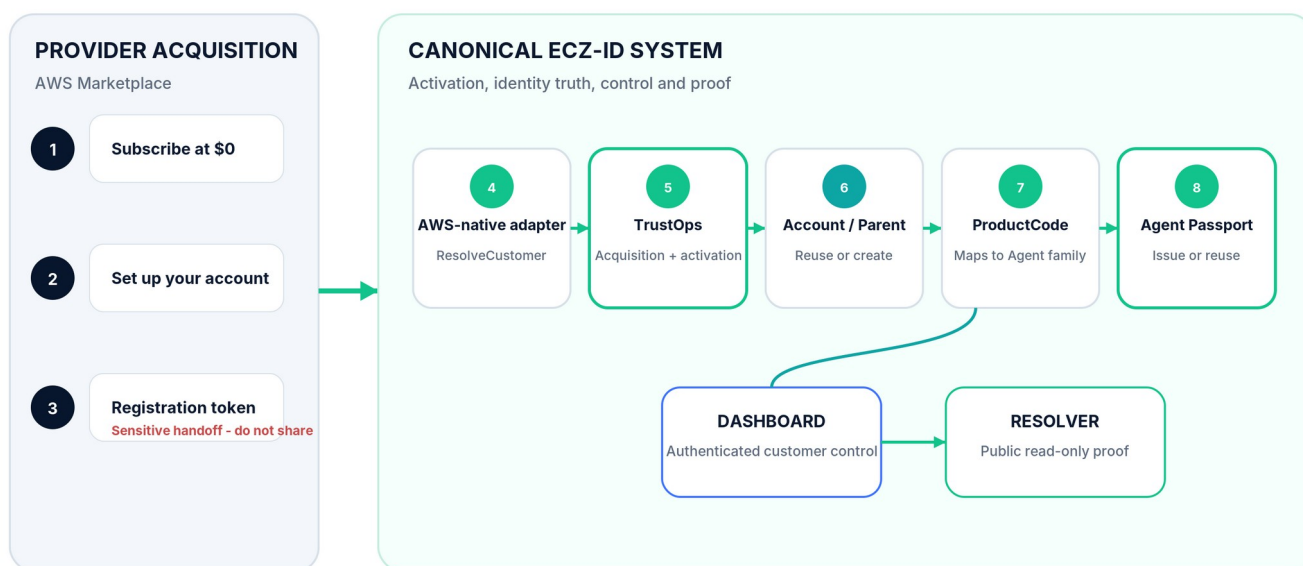

[START HERE](#)

The whole journey in one view

The Passport is permanently free. Subscribe in AWS, complete the account handoff, then verify the resulting canonical Agent ECZ-ID in Resolver.

AWS Marketplace → canonical Agent Passport → Resolver

AWS supplies acquisition context; ECZ-ID remains the canonical identity and proof system.

PRICING

ECZ-ID Agent Passport is permanently free through this AWS Marketplace listing. It is not a time-limited Free Trial.

AWS

Acquisition / provider context

ECZ-ID

Canonical identity + activation

Resolver

Independent public re-check

STEP-BY-STEP ACQUISITION

1. Subscribe → 2. Set up your account → 3. handoff

AWS Marketplace provides the customer acquisition context; the registration token is sensitive and must not be copied into public or support channels.

1 SUBSCRIBE AT \$0

Open the ECZ-ID Agent Passport listing and subscribe at \$0. There is no ECZ-ID software charge for the Passport.

2 SET UP YOUR ACCOUNT

Choose Set up your account so AWS can continue into the ECZ-ID fulfillment path.

3 REGISTRATION TOKEN

AWS passes a registration token to ECZ-ID. Treat it as sensitive operational input.

FULFILLMENT ENDPOINT

<https://trustops.ecocitizenz.com/aws/marketplace/fulfill>

SECURITY

Do not copy the AWS Marketplace registration token into screenshots, chat, tickets or public documentation. If setup fails, record the visible error and time instead.

RESOLVECUSTOMER AND TRUSTOPS

4. identify the AWS customer → 5. activate the ECZ-ID acquisition flow

The AWS-native adapter resolves the Marketplace customer and hands acquisition into TrustOps.

AWS-NATIVE ADAPTER

Uses the AWS Marketplace integration to resolve the AWS customer context. Provider-native identifiers remain acquisition/binding context, not ECZ-ID authority roots.

TRUSTOPS

Processes acquisition and activation, applies the supported account / Parent reuse rules and hands the customer into the canonical lifecycle.

ARCHITECTURE LAW

AWS Marketplace = acquisition/provider context. TrustOps = acquisition/activation. Core = canonical identity truth. Dashboard = control. Resolver = read-only proof.

Concurrent Agreements

The AWS integration is designed to support AWS Marketplace agreement context without using the agreement itself as the canonical ECZ-ID identity.

No duplicate identity

Acquisition should reuse the supported existing EcoCitizen account and Parent where appropriate instead of intentionally creating another canonical identity.

ACCOUNT, PARENT AND PASSPORT REUSE

6. reuse or create supported account + Parent → 7. map ProductCode → 8. issue or reuse Passport

The target outcome is one canonical identity for the intended agent, not a new Passport for every subscription click.

ACCOUNT

Reuse the supported existing EcoCitizen account when appropriate; otherwise follow the canonical account acquisition path.

PARENT

Reuse the relevant Parent/organisation relationship where supported; avoid deliberate duplication.

AGENT PASSPORT

ProductCode maps to the Agent Passport family. Issue a new Passport only when the object legitimately needs one; otherwise reuse the canonical one.

DUPLICATE-PREVENTION RULE

The same logical agent should keep the same canonical Agent ECZ-ID where supported. Update changing context as bindings/evidence rather than minting another identity.

FIRST CUSTOMER CONTROL

9. continue to Dashboard

Dashboard is the authenticated customer control plane; Resolver is the public proof surface. They are intentionally different.

DASHBOARD - PRIVATE CONTROL

Use Dashboard to view the permitted customer estate, inspect Passports & Identity, Products & Entitlements, Operations, Evidence & Proof, Badges & Sharing and organisation/account context available to your role.

RESOLVER - PUBLIC PROOF

Use Resolver to present and independently re-check the bounded public Agent Passport record. Resolver is not the mutation or control plane.

FIRST CHECK

Confirm the expected Agent Passport exists, the intended Parent/organisation context is visible where supported, and the public Resolver record resolves as expected.

- Do not create another Passport merely because you cannot immediately find the expected record.
- Distinguish acquisition/issuance failure from a copied-identifier or sign-in problem.
- If support is needed, provide the failed stage, time, visible error and ECZ-ID/Passport ID if available - never the registration token.

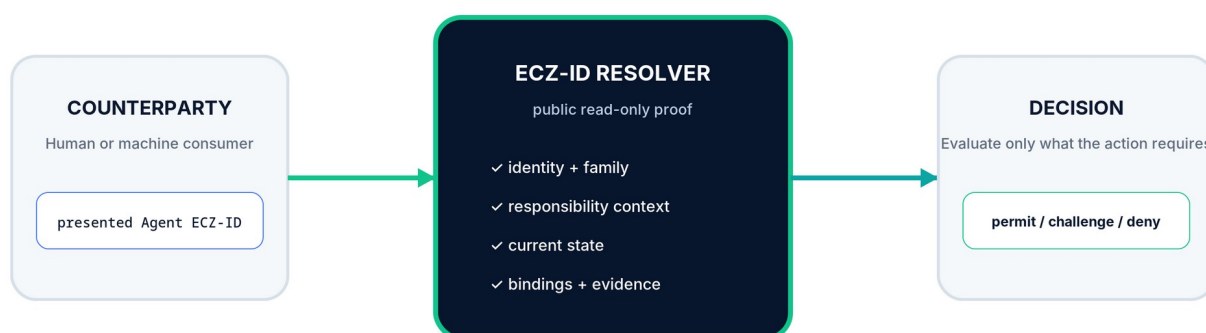

FIRST RESOLVER VERIFICATION

10. re-check the Agent Passport

A successful AWS acquisition is not complete from the customer's perspective until the Agent ECZ-ID can be independently resolved and interpreted correctly.

Independent re-check when freshness matters

Human and machine consumers can resolve the same Agent ECZ-ID again before consequence.

GET https://api.ecocitizenz.com/api/p/{ecz_id}.json

Absent required data = not established. Re-resolve according to freshness policy.

MACHINE-READABLE ROUTE

GET https://api.ecocitizenz.com/api/p/{ecz_id}.json

- Validate Passport family = Agent.
- Check the expected organisation / Parent relationship where relevant.
- Read current published state.
- Inspect only the bindings and evidence needed for the integration.
- Evaluate authority/delegation separately when the action requires it.

SECURITY AND SECRET HANDLING

What must never enter public proof or support channels

The AWS registration token and other credentials are operational secrets; the Passport is designed to publish bounded proof, not secrets.

NEVER SEND

- Passwords
- API keys
- AWS Marketplace registration tokens
- Certificates/private keys
- Other credentials or secrets

SAFE SUPPORT CONTEXT

- Failed stage
- Visible error
- Occurrence time
- AWS account context where appropriate
- ECZ-ID / Passport ID if available

RESOLVER BOUNDARY

Only publish information intended for the public proof surface. Treat absent private data as private/absent - do not compensate by adding secrets or internal identifiers.

Support

support@ecocitizenz.com

Support covers AWS setup, activation, Passport issuance/reuse, account access, Resolver verification and troubleshooting. No unsupported response-time or SLA promise is implied.

TROUBLESHOOTING

Diagnose the failed stage before taking action

The fastest recovery path is to identify where the journey stopped, preserve the canonical identity and avoid repeating actions that can create confusion.

Subscribe unavailable

Confirm the product is visible to the AWS account permitted for the Limited listing or that it is Public.

Set up your account fails

Record the visible error and time. Do not expose the registration token.

ResolveCustomer / activation fails

Contact support with AWS account context and the failed stage. Do not repeatedly create identities as a workaround.

Already have EcoCitizenz account

Use the supported existing-account path rather than intentionally creating a duplicate.

Resolver does not show Passport

Confirm acquisition completed and the ECZ-ID is correct; distinguish issuance delay/failure from copied-identifier error.

GO-LIVE CHECKLIST

The 60-second completion check

Use this checklist before considering the AWS acquisition complete for the intended customer journey.

- Subscribed at \$0.
- Set up your account completed.
- AWS customer was resolved through the supported integration.
- Expected EcoCitizen account / Parent reused or created according to canonical flow.
- ProductCode mapped to Agent Passport family.
- Canonical Agent Passport issued or reused.
- Dashboard access works for the permitted customer experience.
- Resolver can re-check the Agent ECZ-ID.
- No duplicate identity was created.
- No registration token or secret was exposed.

NEXT ACTION

Operate the Passport over time using ECZ-ID Agent Passport Operations, Lifecycle and Troubleshooting Guide.
